Special Report #10

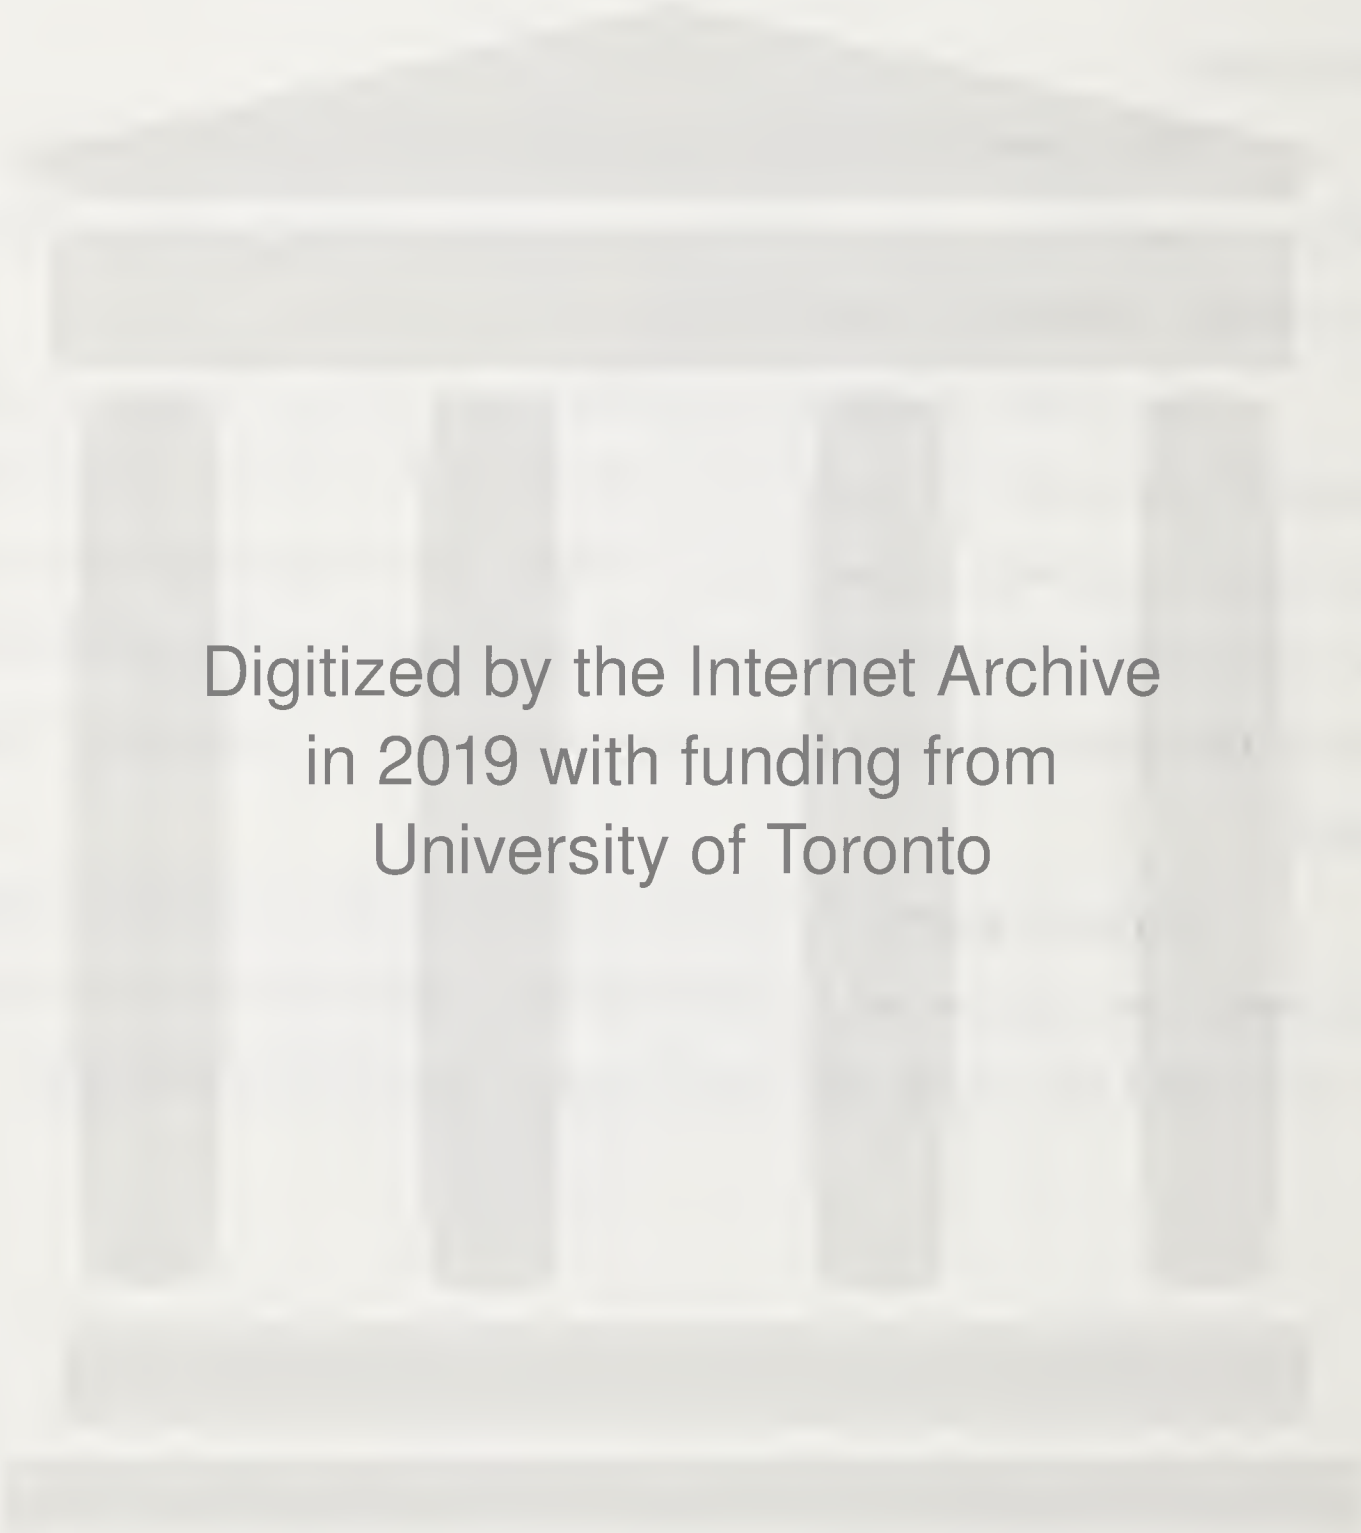

1130910

Introduction

This report is a general appraisal of the over-all Metropolitan Hamilton Population. It is intended as a guide for more detailed studies of individual municipalities or areas.

The 5 year population projections are the most important figures because of the inability to assess objectively all the many factors which will affect long term projections. Further, the relevant matter is not the 5 year increase in persons, but the development program necessary to provide the land, utilities and services required to accommodate these people.

If yearly appraisals should prove that the projections require adjustment, the program can be accelerated or decelerated as necessary to ensure that the growth and program are in step with one another.

1) Study Area

The study area as shown on Plate #1 includes the municipalities, shown below, which lie within the Hamilton urban complex at the south western tip of Lake Ontario.

CITY OF HAMILTON

HAMILTON-WENTWORTH PLANNING AREA

Town of Dundas

Town of Stoney Creek

Township of Saltfleet

Township of Binbrook

Township of Glanford

Township of Ancaster

Township of Beverly

Township of West Flamborough

BURLINGTON AND SUBURBAN PLANNING AREA

Town of Burlington

Village of Waterdown

Township of East Flamborough

2) Record of Population Growth

The growth for each municipality since 1941 is given in Appendix "A". These figures were obtained from the Annual Reports of the Ontario Department of Municipal Affairs. The 1965 population for the Metro Hamilton Study Area is recorded as 421,889 persons, whereas that for the City alone is 280,591 or 66% of the Metro Area.

3) Distribution of Growth

An important factor in a study of population growth is the spatial distribution, particularly where the various areas consist of separate local government units. The distribution of the present population by major divisions of the Metro area is shown on Plate #1.

Recent trends in growth distribution are also significant. Plate #2 shows the growth from 1960 to 1965 for the major divisions of the Metro area. As indicated, all areas show a significant increase, except for the "Hamilton-Lower" area, where the absorption of residential areas by industry has resulted in a population growth of only 0.4%.

4) Future Growth

A number of population forecasts for the Metro Hamilton Area have been made in recent years. Some of these are recorded in Appendix "C" and graphically presented on Plate #4.

These various estimates emphasize our inability to project with confidence any distance into the future. We have accepted the median values of these 20 year estimates and recommend the use of the more reliable 5 year projection, which has a narrower range. Further, the practice of most municipalities in maintaining a five year Capital Budget permits a direct link to this projection. Yearly appraisals should be made of actual growth, the 5 year projection refined and the 5 year development program budget extended or retracted as required.

Future Distribution

Distributing the expected growth is even more subjective, because of its reliance on many political decisions at all levels of government. Again, yearly appraisals are a must to ensure that local municipal development programs are complementary to growth demands.

Growth of any particular area will not depend solely on the development demand. There must be a corresponding desire and capability on the part of the municipality to satisfy or even attract additional demand by carrying out the necessary procedures such as utility extensions, subdivision approval and expansion of services.

An assessment of the present situation and recent growth trends has resulted in an expected distribution to each of the municipalities as given in "Appendix "A" and shown on Plate #3.

Appendix "C"

Various Projections

Projections (A and B)

These projections utilize a method of comparison to a larger area which, because of size and stability, will have a more reliable forecast. Method "A" is a percentage comparison of Hamilton with Canada, while method "B" is a comparison with Ontario.

It is regrettable that the most recent reliable forecasts for Canada and Ontario were published as long ago as 1957 by the Gordon Royal Commission. The social changes, and particularly the change in the birth rate, which have occurred since 1957, cast some reservations on these two population projections.

NOTES:

(a) Denotes Dominion Bureau of Statistics Census.

(b) 1964 Annual Report - Canadian Economic Council (1966-20,000,000)
(1970-22,000,000)

(c) Royal Commission - W.L. Gordon - Chairman Nov. 1957

Projection "C"

This projection is a percentage comparison with all the major metro areas in Canada. Because the urban population is increasing at a faster rate than the total Canadian population, there is an additional relationship of these seventeen major metro areas to Canada.

This projection also relies on the 1957 Gordon Royal Commission forecasts.

Projection "D"

This projection entails a detailed analysis of births, deaths and net migration. The projections are those done by the City's Planning Department and presented in their report "Urban Growth and Economic Health 1963".

The continuing drop in the birth rate and a slight increase in the death rate suggests that the long term projection may be high.
